

Backend Developer

Istanbul, Türkiye | +90 (539) 224 6618 | kaantopcu.dev@gmail.com | [linkedin.com/in/kaantopcu/](https://www.linkedin.com/in/kaantopcu/) | github.com/kaantpcc | kaantopcu.dev

Summary

Backend Developer with hands-on experience in Java/Spring Boot, ASP.NET Core, and Node.js, building REST APIs, authentication flows, and database-driven systems. Skilled in PostgreSQL, MSSQL, Redis, RabbitMQ, Docker, and API gateway architecture, with a focus on scalable backend development and microservice-based systems.

Professional Experience

Junior Backend Developer | BitkaSoft

Dec 2025 – Apr 2026

- Developed and maintained Node.js backend services for client-facing workflows, designing REST APIs and optimizing PostgreSQL queries through schema refinement and indexing. Implemented authentication mechanisms, enhanced API reliability and performance, and built production-ready integrations with Kommo CRM to support real customer operations and business processes.

Full Stack Developer Intern | Emakin

July 2025 – Aug 2025

- Integrated .NET Framework services and REST APIs, supported SQL operations, and improved system stability through defect resolution. Configured XML-based business workflows on Emakin BPM to enhance automation consistency across enterprise processes. Contributed to the Arbalet AI Agent by integrating backend services and ensuring stable API communication for a solution actively used by thousands of enterprise users.

Full Stack Developer | KOU Embedded Systems Lab.

Mar 2024 – Apr 2025

- Developed university-wide software solutions using ASP.NET Core MVC and MSSQL, focusing on REST API development, relational database design, and backend-driven application workflows.
- Built a scalable API Gateway for KOU Mobile using ASP.NET Core and Kong, centralizing routing, authentication, and request management. Implemented JWT-based access control, monitoring, logging, and rate limiting. Standardized API governance across 30+ internal microservices, reducing request errors by ~15% and improving system stability.

Education

Kocaeli University – Computer Engineering (Bachelor's Degree)

2022 – July 2026

Relevant Courses: Data Structures and Algorithms, Database Management, Object-Oriented Programming, Operating Systems, Computer Networks, Software Engineering, Software Desing Patterns

Projects

WordBrust | Lead Backend Developer

May 2025

[Link to the project](#)

Designed and developed the backend for a real-time multiplayer game using Node.js, PostgreSQL, and Socket.IO. Implemented JWT- and OAuth 2.0-based authentication and managed Docker-based deployment.

Spendly - AI-Powered Personal Finance Assistant | Lead Backend & AI Developer

Oct 2025 – July 2026

Built Spendly, an AI-powered personal finance assistant using Spring Boot, integrating OCR and ML pipelines for automated receipt processing, categorization, and financial insight generation. Architected scalable, asynchronous backend workflows with Redis and RabbitMQ, secured with Spring Security and JWT-based authentication, and backed by PostgreSQL persistence and SSH-based deployment. Reduced API response latency by ~40% through JVM tuning, HikariCP connection pool optimization, and Redis caching.

Skills

Languages: Java, C#, JavaScript/TypeScript, Python, SQL

Backend: Node.js, Express, ASP.NET Core, Spring Boot, REST APIs

Databases: PostgreSQL, MSSQL, Redis

Architecture & Messaging: Microservices, RabbitMQ, Kong API Gateway, JWT, OAuth 2.0

Tools: Docker, Git, Postman
